EDUCATION

Master of Engineering (Structural) – The University of Melbourne, 2015

Bachelor of Engineering (Civil) – The University of Melbourne, 2013

- Graduated with Honours
- **Structural Engineering** – concrete, timber and steel design (AS3600/HB48/AS1170), structural analysis.

SKILLS SUMMARY

Technical Skills

- **Microsoft Office Suite** – Extensively utilised Microsoft Word, Excel, Project and Powerpoint.
- **Inducta Design Software** – Produced models for various projects to verify calculations.
- **Planning and Forecasting** – Planned and forecasted deadlines and goals for projects to operate without delays.

Interpersonal Skills

Leadership, teamwork and communication skills developed from the following.

- **Leadership** – Mentoring younger engineers daily and captained soccer team.
- **Attention to detail** – Site/Design Engineer for over five years in which I have checked workmanship quality.
- **Initiative** – Implemented streamlined processes and assisted younger engineers during employment.
- **Collaboration** – Completed projects successfully by collaborating with the team and design consultants.
- **Stakeholder Management** – Attended design meetings and client functions to discuss program, budget, fees and design.
- **Communication** – Communicated instructions on site to contractors personally, through the phone and via email.

EMPLOYMENT HIGHLIGHTS

Partridge Engineers, Sydney (2024-Current)

Team Leader – Senior Remedial Engineer

CORE Consulting, Sydney (2022-2024)

Team Leader – Senior Remedial Engineer

Currently managing a team of five (5) engineers and drafters at CORE Consulting Engineers. I have a wealth of experience with technical expertise in both remedial and structural engineering/project management. I have worked on a variety of prominent projects throughout Australia, and have a strong background in managing diverse residential and commercial projects from both the Contractor and Client side. The key areas of focus involve overseeing projects and collaborating with building owners, managers, and subcontractors to ensure the successful completion of each project.

Waterproofing, structural design, spalling concrete, facade works, structural repair, blast and painting, remediation, corrosion protection, re-strengthening existing structures, steel & concrete repair, tender management and construction phase management at the following projects:

Residential

- 67 Ocean Street, Woollahra, NSW
- 60 Walker Street, Rhodes, NSW
- 49 Spencer Street, Rose Bay, NSW
- 22 Hardy Street, North Bondi, NSW
- 315 Bondi Road, Bondi Beach, NSW
- 33-35 Kentwell Road, Allambie Heights, NSW
- 25 Greenwich Road, Greenwich, NSW
- 30 The Crescent, Vaucluse, NSW
- 92 Hunter Street, Hornsby, NSW
- 99 Alfred Street, Narrabeena, NSW

Commercial/Industrial

- 4A Meridian Place, Bella Vista NSW
- 10 Norbrik Avenue, Bella Vista, NSW
- Sydney Harbour Bridge Structural Inspection
- Heart of Willoughby, NSW

SCP Consulting, Sydney (2012-2022)

Structural Design Engineer

Cranbrook School Redevelopment, Bellevue Hill

School re-development includes a new aquatic and fitness centre with a 50m swimming pool, theatre, performance rooms, assembly hall, dining area, chapel and 11 new classrooms.

Responsibilities of the project were:

- Managing the design and construction stage of the project
- Managing principal contractors on site
- Inspection of conventional reinforcement and post tensioned (PT) ducts
- Ensuring workmanship on site was at a high standard
- Provided high level support during construction stage by resolving engineering solutions
- Ensured the works completed were as per technical specifications and as per standards
- RFI's

5 Skyline Place – Frenchs Forest

Construction of five storey apartments with mixed-use space such as cafes, medical centres, and retail. Structure also consists of a two levels of underground parking.

Responsibilities of the project were:

- Managing the design and construction stage of the project
- Managing principal contractors on site
- Inspection of conventional reinforcement and post tensioned (PT) ducts
- Ensuring workmanship on site was at a high standard
- Provided high level support during construction stage by resolving engineering solutions
- Ensured the works completed were as per technical specifications and as per standards
- RFI's

Cardno, St Leonards, Sydney (July 2015 – 2021)

Site/Structural Engineer

- **Winner of Cardno APAC Safety Award Year 2020**
- **Nominated as Future Leader of the Year 2020**
- **Nominated as the ACSE Young Engineer of the Year 2019**

Warrick Lane Precinct Redevelopment – Blacktown

Four level underground car park accommodating approximately 485 car spaces, with a central park located on top of the car park roof slab and three level building on either side of the car park (eastern and western flanking buildings).

Responsibilities of the project were:

- Managing the design and construction stage of the project
- Designing structure from concept stage to tender stage
- Principal structural engineer/peer review for client during construction stage
- Ensured the works completed were as per technical specifications and as per standards
- Claimed variations and extensions of time when required
- Provided high level support during construction stage by resolving engineering solutions
- Managed the finances during billing cycle and reviewed variations and claims

Rooty Hill Carpark and Train Station Development

Six-storey car park accommodating approximately 750 car spaces, and upgrade for pedestrian links to both sides of the station.

Responsibilities of the project were:

- Managing the design and construction stage of the project
- Managing principal contractors on site
- Ensured budget was not exceeded
- Claimed variations and extensions of time when required
- Provided high level support during construction stage by resolving engineering solutions
- Ensured the works completed were as per technical specifications and as per standards
- RFI's

St Elias Church, Guildford

Four-tiered level underground car park with a large two level Catholic Church located on top of the car park. All slab and beams were conventional reinforcement.

Responsibilities of the project were:

- Ensured budget was not exceeded
- Claimed variations and extensions of time when required
- Provided high level support during construction stage
- Managing the design and construction stage of the project
- Managing principal contractors on site
- Ensuring workmanship on site was at a high standard
- Ensured the works completed were as per technical specifications and as per standards
- RFI's
